

User Guide — MCA Cross-Departmental Demand & Revenue Tracker

This guide explains how to enter data, read the dashboards, and maintain the workbook. It assumes no prior knowledge of the tool. Keep it beside the workbook; it stands alone.

1. What the workbook does

Every marketing team enters one row per day per business group into one of two input sheets: **leads** into **Demand_Input**, revenue into **Revenue_Input**. Everything else — period totals, percentage movements, charts and KPI tiles — is calculated automatically. No user ever edits a formula during normal use.

2. The sheets, in order

Sheet	Tab colour	What it is	Who touches it
ReadMe	grey	One-page orientation inside the workbook	Everyone reads it; nobody edits it
Dashboard	blue	Tracking view: month, quarter, year-to-date, with movement percentages	Read-only, except the commentary blocks
Analysis	blue	Analysis view: KPI tiles, trends, contribution, insights	Read-only, except the Key Insights text
Analysis_Calc	grey	Calculation engine for the Analysis sheet	Nobody edits it
Calculations	grey	Calculation engine for the Dashboard sheet	Nobody edits it
Demand_Input	green	Data entry — daily leads	Campaign owners
Revenue_Input	green	Data entry — daily revenue (Rands)	Campaign owners
Lists	grey	Approved values for the drop-down lists	Workbook owner only

Rule of thumb: **green tabs are for typing; blue tabs are for reading; grey tabs are never edited** (commentary blocks excepted).

3. Entering data (daily or weekly)

1. Open **Demand_Input** (leads) or **Revenue_Input** (revenue).
2. Go to the first empty row at the bottom of the table. Type the date in column A (any standard Excel date entry works, for example `2026/07/18`).
3. In column B, choose the **Business Group** from the drop-down list. Typing a value that is not on the list is rejected with an error message.

4. In column C, choose the **Campaign/Stream** from the drop-down list. Each business group reports under exactly one campaign/stream; the valid pairings are listed on the **Lists** sheet.
5. In column D, enter the day's figure: a whole number of leads, or revenue in Rands. Negative values are rejected.
6. Save the file. Both dashboards update the next time the workbook recalculates (immediately, or on reopening).

If a team reported nothing for a day, simply enter no row for that day. Missing days count as zero; they do not break any calculation.

4. Reading the tracking Dashboard

July

Monthly

Quarterly

YTD

Demand Generation

		Leads		Leads		Leads	
Business Group	Campaign/Stream	Current Month	Month-to-Month %	Current Quarter	Quarter-to-Quarter %	January to date	Total
JSE SheInvests	Ticket Sales / Sponsorships	191	+2%	191	-54%	986	4 261
Digital Marketing	YouTube / Listings Streaming	205	+27%	205	-63%	1 075	
Events	Listings / External Events	170	-10%	170	-67%	1 112	
Marketing Services	Secondary Markets	208	+37%	208	-57%	1 088	

Revenue Generation

		Revenue		Revenue		Revenue	
Business Group	Campaign/Stream	Current Month	Month-to-Month %	Current Quarter	Quarter-to-Quarter %	January to date	Total
Primary Markets	Beyond Capital Campaign	R 11 572	+93%	R 11 572	-47%	R 48 560	R 227 195
Secondary Markets	Sales Campaign - Colocation	R 7 600	-32%	R 7 600	-78%	R 65 304	
Information Services	Marketplace	R 8 638	+64%	R 8 638	-73%	R 59 335	
Issuer Services	Claim It Campaign	R 16 219	+200%	R 16 219	-3%	R 53 996	

Note: current month and current quarter reflect the period to date; percentage movements compare the period to date against the full previous period.

Insights

Q2 revenue closed 33% above Q1 (R104,716 vs R78,450), led by May — the strongest month of the year to date at R49,898. Secondary Markets (Colocation) leads YTD revenue at R65,304; on the demand side, Events is the top source with 1,112 leads YTD. July is tracking strongly: month-to-date revenue of R44,029 has already exceeded the full June total.

Looking Ahead

Sustain Colocation momentum into Q3 and replicate its cadence for the Marketplace stream. Refresh JSE SheInvests creative ahead of Q3 ticket sales, and review Digital Marketing lead quality with the Listings team.

- The large month name at the top left is today's month; the whole sheet is always "as of today".
- **Current Month / Current Quarter** columns show the period *to date*.
- **Month-to-Month %** and **Quarter-to-Quarter %** compare the period to date against the *full* previous period. Green means growth, red means decline. Early in a month or quarter these percentages will naturally look low — the current period has only just started. A footnote on the sheet states this.
- **January to date** is the year-to-date total per business group; the shaded **Total** box is the grand total across all groups.
- **Insights** and **Looking Ahead** are written by the analyst at the monthly review. They are the only editable cells on this sheet.

5. Reading the Analysis dashboard

From top to bottom:

- **KPI tiles:** year-to-date leads, year-to-date revenue, revenue per lead, the best revenue month so far, and the largest revenue contributor.
- **Monthly trend lines:** leads and revenue per business group, January to the current month. Lines stop at the current month; future months are intentionally blank, not zero.
- **Year-to-date bars:** each group's total contribution, labelled with exact values. Every business group keeps the same colour on every chart, so the views can be read together.
- **Cumulative revenue** shows progress through the year; **Revenue by Quarter** compares completed quarters (the current quarter shows its progress so far).

- **Key Insights** is written commentary, updated at each monthly review.

6. Monthly review routine (analyst)

1. Confirm all teams have entered their rows for the closed month.
2. Skim both input sheets for anomalies (duplicated rows, implausible values).
3. Reopen the workbook so all `TODAY()` -based windows move to the new month — no formula changes are needed.
4. Rewrite the **Insights**, **Looking Ahead** and **Key Insights** commentary to reflect the closed month.
5. Save and distribute (or point stakeholders to the shared location).

7. Rules that keep the workbook working

- Do **not** rename sheets, the `DemandTbl1` / `RevenueTbl1` tables, or column headings — formulas reference them by name.
- Do **not** insert rows anywhere except the bottom of the input tables.
- Do **not** type into grey-tab sheets. If a number looks wrong, the cause is in the input rows.
- Adding a new business group or campaign is a structural change reserved for the workbook owner: add the pairing on **Lists**, extend the group blocks on **Calculations** and **Analysis_Calc**, and extend the dashboard rows that reference them.

8. Troubleshooting

Symptom	Likely cause	Fix
A group shows 0 for a period that has data	Business Group text in the input rows does not exactly match the approved value	Re-select the value from the drop-down list
A percentage shows blank	The previous period had no data, so no comparison is possible	Nothing to fix; the blank is intentional
An entry is rejected with an error message	The value is not on the approved list, is negative, or is not a valid date	Correct the entry; approved values are on the Lists sheet
Charts show months with no line	Those months are in the future	Nothing to fix; this is intentional
Numbers look stale	The workbook has not recalculated	Press F9, or close and reopen the file
